

MAHAM NAZ

Full Stack Developer & Frontend Designer

mahamnaz137@gmail.com | +92 331 0419608
GitHub: Maham-Naz | LinkedIn: maham-naz-6967aa363

PROFILE SUMMARY

Dedicated Full Stack Developer and Frontend Designer with a keen eye for aesthetics and a passion for building seamless digital experiences. Skilled in web development, SaaS application development, and backend/database architecture, bridging the gap between elegant design and robust functionality. Currently pursuing a Software Engineering degree with hands-on experience across academic and personal projects.

EDUCATION

Bachelor of Software Engineering (BSSE)

University of Engineering and Technology (UET), Lahore — New Campus | Batch(2025-2029)

TECHNICAL EXPERTISE

- Web Development — building modern, responsive web applications from concept to deployment with clean, maintainable code
- SaaS Application Development — multi-tenant architecture, subscription workflows, and full-cycle product deployment
- Backend & Database Architecture — Python, SQLite3, MySQL, MongoDB; scalable schemas, query optimization, transactional management
- HTML5 & CSS3 — pixel-perfect, fully responsive UI with Flexbox, CSS Grid, and custom animations
- JavaScript (ES6+) — async programming, event handling, DOM manipulation, modern JS patterns
- React.js — hooks, state management, Context API, scalable single-page applications
- Tailwind CSS, C++ (Data Structures & OOP), Networking (Socket Programming, TCP/UDP)

PROJECTS

StudyFlow | React, Vite, Tailwind CSS

A comprehensive study management application featuring a Pomodoro timer, goal tracking, progress analytics, session history, and productivity insights to help students optimize their learning.

VibeChat | Python, Socket, Tkinter, Threading

A feature-rich real-time messaging application built with Python socket programming, enabling peer-to-peer communication, file sharing, voice & video calling, and multi-threaded connection handling.

Collaborative Network Monitoring & Alert Dashboard | Python, Multi-threaded TCP, Tkinter, JSON, SSL/TLS

A Computer Networks course project featuring a multi-threaded TCP server, real-time GUI dashboard, JSON-based protocol, and SSL/TLS encryption for secure data exchange.

Smart Campus Management System | *C++, DSA concepts*

Developed a role-based campus management application using Object-Oriented Programming concepts, file handling, templates, and dynamic data management to manage students, faculty, courses, and campus facilities.

Portfolio Website | *HTML, CSS, JavaScript*

A visually stunning personal portfolio featuring particle animations, glass morphism design, dark/light theme toggle, smooth scroll reveal, and an Email JS-powered contact form.

RELEVANT COURSEWORK

- Data Structures & Algorithms (Trees, Heaps, AVL Trees, Graphs, Hashing)
- Computer Networks (Network & Link Layer, Socket Programming, Multithreaded Servers)
- Software Engineering (UML Modeling, Software Testing & Documentation)
